Final project presentation of ΣDAD

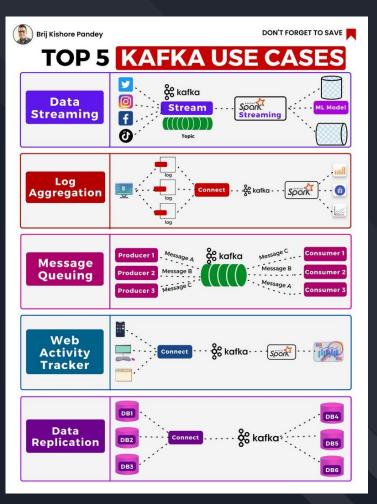

(Σxtensible Dynamic Apache-Kafka Deployer)

What is Apache Kafka?

- Real time data streaming
- Website activity tracking
- Messaging and events listener
- Operational metrics
- Log aggregation
- Metrics

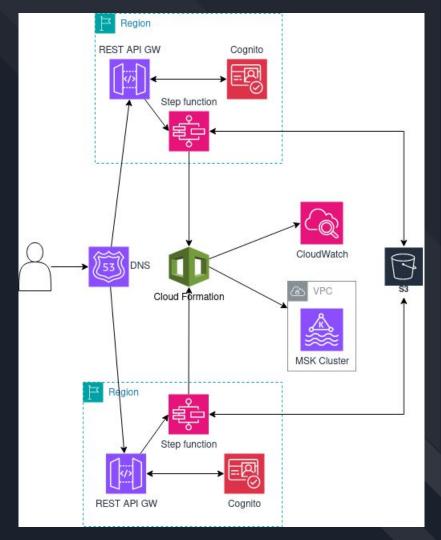

Most common use cases

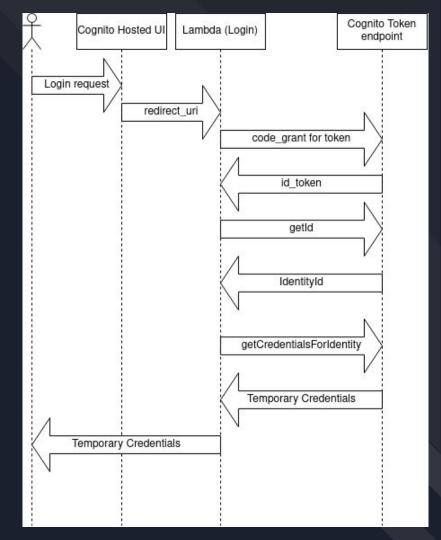

What problems we solve

- Removing tedious configuration of MSK clusters
- Learning new Cloud concepts
- Getting used to non-convenient UIs

Cost awareness

A more realistic Estimation

Security

The Cognito user Policy

```
"Sid": "VisualEditor2",
"Effect": "Allow",
"Action": [
    "kafka-cluster:*Cluster",
    "kafka-cluster:Connect"
"Resource": "arn:aws:kafka:eu-central-1:*:cluster/*/*",
"Condition": {
    "StringEquals": {
        "aws:ResourceTag/MSK-Principal": "${aws:PrincipalTag/username}"
"Sid": "VisualEditor3",
"Effect": "Allow",
"Action": [
    "kafka-cluster:*Data",
    "kafka-cluster:*Topic"
"Resource": "arn:aws:kafka:eu-central-1:*:topic/*/*/*",
"Condition": {
    "StringEquals": {
        "aws:ResourceTag/MSK-Principal": "${aws:PrincipalTag/username}"
```

```
"Sid": "VisualEditor4",
"Effect": "Allow",
"Action": "kafka-cluster:*TransactionalId",
"Resource": "arn:aws:kafka:eu-central-1:*:transactional-id/*/*/*",
"Condition": {
    "StringEquals": {
        "aws:ResourceTag/MSK-Principal": "${aws:PrincipalTag/username}"
"Sid": "VisualEditor5",
"Effect": "Allow",
"Action": [
    "kms:Decrypt",
    "kms:Encrypt",
    "kms:DescribeKey",
    "kms:Verify"
"Resource": "*",
"Condition": {
    "StringEquals": {
        "aws:ResourceTag/MSK-Principal": "${aws:PrincipalTag/username}"
```

Automation & Orchestration

Some of the bigger Difficulties

- Rest API VTL dynamic user Payload manipulation
- Cognito
- CloudWatch Dashboard sharing

Demo

Reflection

• Couldn't provide automatically Shareable Dashboard - deprecated API calls

• The brokers couldn't authenticate using IAM mechanism - tested with official approaches provided by AWS

Our growth

- Better understanding of the context under which different AWS services should be used
- What you definitely shouldn't do/use
- How to create/manage/interact with some of the most used services on AWS, including such out of the scope of the MOSCOW table
- We had many opportunities for bettering our troubleshooting skills - found inconsistencies and loopholes in the AWS Documentation

Thank you for your attention! And before asking anything, remember:
